Projects and Websites

Project 1:

Customer & Product Sales Analysis | Excel, SQL Server, Power BI

- Developed an end-to-end sales analytics solution using SQL Server and Power BI to evaluate customer purchasing behavior and product performance.
- Built SQL queries for KPI reporting, customer segmentation, product analysis, ranking, and time-based trend analysis using joins, aggregate functions, and window functions.
- Designed interactive Power BI dashboards to monitor key business metrics, sales trends, top-performing products, and customer insights through intuitive visualizations.
- Generated data-driven recommendations to support business decision-making and improve understanding of customer and product performance.
- Technologies: SQL Server, Power BI, DAX, Data Modeling, Business Intelligence

Project 2:

Customer Payment Behavior & Accounts Receivable Analytics | SQL Server, Power BI

- Built a finance analytics project to analyze more than 45,000 invoices and over ₹816 million in Accounts Receivable data, focusing on customer payment behavior and collection performance.
- Developed SQL-based KPIs and analytical queries for Total Accounts Receivable, Late Payment Percentage, Weighted Average Delay, Average Invoice Value, payment methods, customer analysis, and historical trends.
- Created a multi-page Power BI dashboard featuring Executive Summary, Payment Delay Analysis, Customer Analysis, Trend Analysis, and Payment Method insights to provide a comprehensive view of receivables performance.
- Identified payment patterns, customer risks, and collection trends through aging analysis and business-focused reporting, enabling actionable insights for cash flow and credit management.
- Technologies: SQL Server, Power BI, DAX, Accounts Receivable Analytics, Financial Data Analysis, Data Visualization
